THE
LINUX
FOUNDATION

Jun 7, 2023

To Whom It May Concern:

This letter confirms that Karanjot Singh has successfully completed *CNCF - Kubescape: Implement security controls based on penetration testing best practices*, in the 2023 Mar-May term. The Linux Foundation runs a mentorship program for this and other open source software projects to help bring students, new programmers, and a diverse set of participants into the broader open source ecosystem by partnering them with experienced mentors to improve the quality of community projects.

Karanjot participated in the *CNCF - Kubescape: Implement security controls based on penetration testing best practices* mentorship between March 8, 2023 and May 31, 2023. During that time, Karanjot contributed to the project, regularly interacted with his mentor, and successfully completed all criteria needed to pass and graduate from the mentorship.

Karanjot worked remotely on the project and was not an employee of The Linux Foundation at any time. Karanjot received a stipend for participating in the mentorship.

Karanjot's project can be seen on the Mentorship platform at:
https://mentorship.lfx.linuxfoundation.org/project/db63c23a-2b41-40e0-a833-cf0e2c33c739

More information about the Linux Foundation Mentorship programs is available at LFX Mentorship. Should you require any further information, please don't hesitate to contact our team via email at mentorship@linuxfoundation.org.

Sincerely,

Nate Waddington
The Linux Foundation Mentorship Program
